

19" Racking Systems

PROFESSIONAL AUDIO PRODUCTS

DESCRIPTION

These racking systems have been designed for audio and communication systems. They are durable, strong, good looking, lightweight, and easy to assemble.

Rack frames: These extruded aluminium rack frames are finished in black to match most modern audio equipment. Equipment can be mounted from the front or rear as all uprights are fully punched. Matching panel sets are also available separately (Comprising of 2 sides & a top panel). Provision has been made for optional castors (or castor tray) to simply snap-fit if required. This makes it very simple to move the rack.

Rack Frame Doors: Matching doors are available constructed from folded steel with or without a clear perspex panel. All models are provided with two key locks except the 9U models which are provided with a single key lock. All rack doors are keyed alike.

Assembly: Each rack frame is supplied complete with 12 custom extruded aluminium sections and 8 ABS corner connector pieces. The sections and corner pieces simply push-fit together. A rubber or wooden mallet is recommended to fit together the self aligning pieces. Further strength can be obtained by pop rivetting the various overlapping extruded sections if desired. Rack doors are fixed to the rack frame by using pop rivets or screws. Installation of the handles and locks is a simple procedure and installation instructions are supplied.

All models are 450mm deep.

Overall depth increases 25mm per door.

Height is increased by 45mm when castor wheels are added.

FEATURES

- Supplied in flat modular format
- Assembles in just minutes
- Wide variety of accessories for differing installations
- Aluminium construction with ABS plastic corners
- Perspex or steel doors available
- Panel sets available (includes top and 2 side panels)
- Castor wheels or tray available
